2. Weather Update:

- a) **Temperature:** Minimum temperatures are likely to be below normal in East India, East M.P., Vidarbha, Marathwada, East U.P., some parts of NE India and many parts of South India. Minimum temperatures is likely to be above normal in many parts of NW India, Gujarat, Madhya Maharashtra and some parts of South Karnataka.
- b) **Rainfall Distribution:** From January 01- February 08 2026, the All-India cumulative rainfall is 41% lower than its Long Period Average (LPA), with regional variations: (i) East & Northeast India: (-) 89%; (ii) Northwest India: (-) 23%; (iii) Central India: (-) 79%; and South Peninsula: (-) 6%.
 - Under the influence of a Western Disturbance, isolated to scattered rainfall/snowfall likely over Western Himalayan region during 9th - 11th February and no significant weather likely over rest parts of the country during next 7 days.
 - A wet spell with Isolated to Scattered rainfall/snowfall likely over Jammu-Kashmir-Ladakh-Gilgit-Baltistan-Muzaffarabad, Himachal Pradesh and Uttarakhand during 9th - 11th and isolated rainfall/snowfall likely over same region on 14th & 15th February with Scattered to fairly widespread rainfall/snowfall with thunderstorm, lightning & gusty winds likely over Jammu-Kashmir-Ladakh-Gilgit-Baltistan-Muzaffarabad and isolated to scattered over Himachal Pradesh on 10th February.
 - Rainfall is likely over J&K, Himachal Pradesh and isolated pockets of Uttarakhand.
 - Dense to very dense conditions likely during morning/night hours at isolated places over East Uttar Pradesh till 10th February.

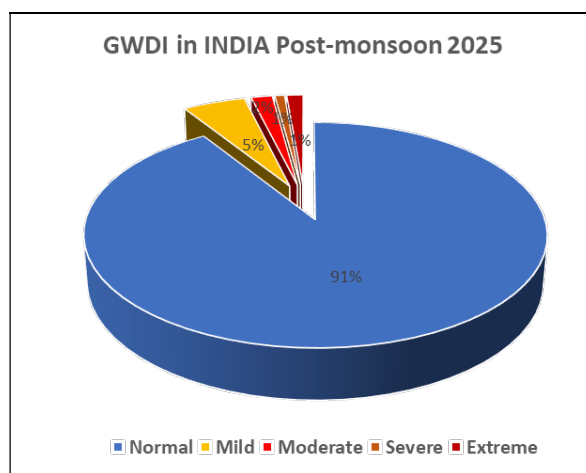

3. Inputs Situation

- a) **Water Reservoir Status:** As on 05 February 2026, the total live water storage in 166 important reservoirs across the country (monitored by CWC) is 122.313 billion cubic meter, which is 67% of total live storage capacity (183.565 BCM). The current year's storage is nearly 108.49 percent of last year's storage and 124.97 percent of the average storage of the last ten years during the corresponding period. The overall storage position

is better than the corresponding period of last year in the country as a whole and is also better than the Normal storage during the corresponding period.

b) Groundwater Levels: In August 2025, In Post-monsoon 2025, around 90% of the country's monitoring stations exhibited a depth to water level within 10 meters below ground level. Deeper water levels of more than 20 m are observed in around 5% of stations of the country covering mainly the western states, especially Western Rajasthan, Punjab, Haryana and Chandigarh.

- The deeper groundwater level in the states like Western Rajasthan, Punjab, Haryana and Chandigarh during Post-monsoon 2025 has been significantly influenced by the over extraction of groundwater compared to the recharge during the monsoon period.
- Annual water level comparison with the previous year Post-monsoon 2024 to Post-monsoon 2025 has shown that about 63% of total analyzed stations of the country experienced rise in annual water level fluctuation may be attributed to the less groundwater extraction compared to 2024.
- About 73% of the analyzed stations of the unconfined aquifer experienced a rise of water level in the decadal mean water level fluctuation of 2015-2024 with respect to Post-monsoon 2025.
- The Groundwater Drought Indices indicate that in **Post-monsoon 2025**, groundwater conditions across India remained largely stable, with **91% of monitoring stations** showing **no deficit**. However, localized deficits were observed in several regions – notably in Meghalaya, Nagaland, and the Dadar Nagar Havili & Daman & Diu.

c) Fertilizers: The fertilizer supply remains stable across all products.

4. Pests & Diseases: There is no major pest incidence that has been reported. The overall intensity of pests and diseases remained below the Economic Threshold Level.
