

CROP WEATHER WATCH GROUP (CWWG) WEEKLY REPORT

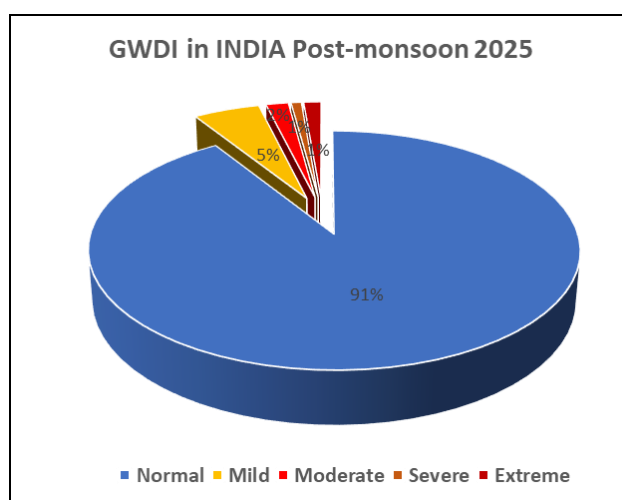

(as on 23.02.2026)

Key Insights

- 1. Rabi Sowing Status:** Summer sowing data collection has been started from 9th February, 2026 and the sowing is in preliminary stage. As on February 20, 2026, the area sown under summer crops is 21.30 lakh ha as compared to 20.38 lakh ha during the corresponding period of last year. Of this, area of 17.78 lakh ha has been sown under rice this year.
 - As on 20.02.2026, 99% of area has been harvested for Kharif crops all over India.
- 2. Weather Update:**
 - a) **Temperature:** Minimum temperatures are likely to be above normal over most parts of the country except East India, central and north peninsula where they are likely to be below normal. Maximum temperatures are likely to be above normal over most parts of the country except central & adjoining peninsular India.
 - b) **Rainfall Distribution:** From January 01– February 22 2026, the All-India cumulative rainfall is 58% lower than its Long Period Average (LPA), with regional variations: (i) East & Northeast India: (-) 92%; (ii) Northwest India: (-) 48%; (iii) Central India: (-) 82%; and South Peninsula: (-) 26%.
 - c) Isolated light/moderate rainfall with thunderstorm, lightning & gusty winds likely over Odisha on 23rd & 24th; with thunderstorm & lightning likely over East Madhya Pradesh, Vidarbha, Chhattisgarh on 23rd; Assam & Meghalaya, Gangetic West Bengal and Telangana on 23rd & 24th February.
 - d) Isolated rainfall/snowfall likely over Himachal Pradesh on 23rd and Uttarakhand on 23rd & 24th February.
 - e) Overall, rainfall is likely to be below normal over most parts of the country except Tamil Nadu, Kerala and some parts of Karnataka, where above normal rainfall activities very likely during the week.
 - Gradual rise in maximum temperature by 3-4°C likely over Northwest India during next 7days. No significant change in maximum temperatures likely over rest parts of the country.

3. Inputs Situation

- a) **Water Reservoir Status:** As on 19 February 2026, the total live water storage in 166 important reservoirs across the country (monitored by CWC) is 113.160 billion cubic meter, which is 62% of total live storage capacity (183.565 BCM). The current year's storage is nearly 111.55 percent of last year's storage and 125.37 percent of the average storage of the last ten years during the corresponding period. The overall storage position is better than the corresponding period of last year in the country as a whole and is also better than the Normal storage during the corresponding period.
- b) **Groundwater Levels:** In August 2025, In Post-monsoon 2025, around 90% of the country's monitoring stations exhibited a depth to water level within 10 meters below ground level. Deeper water levels of more than 20 m are observed in around 5% of stations of the country covering mainly the western states, especially Western Rajasthan, Punjab, Haryana and Chandigarh.
- The deeper groundwater level in the states like Western Rajasthan, Punjab, Haryana and Chandigarh during Post-monsoon 2025 has been significantly influenced by the over extraction of groundwater compared to the recharge during the monsoon period.
 - Annual water level comparison with the previous year Post-monsoon 2024 to Post-monsoon 2025 has shown that about 63% of total analyzed stations of the country experienced rise in annual water level fluctuation may be attributed to the less groundwater extraction compared to 2024.
 - About 73% of the analyzed stations of the unconfined aquifer experienced a rise of water level in the decadal mean water level fluctuation of 2015-2024 with respect to Post-monsoon 2025.
 - The Groundwater Drought Indices indicate that in **Post-monsoon 2025**, groundwater conditions across India remained largely stable, with **91% of monitoring stations** showing **no deficit**. However, localized deficits were observed in several regions – notably in Meghalaya, Nagaland, and the Dadar Nagar Havili & Daman & Diu.

- c) **Fertilizers:** The fertilizer supply remains stable across all products.

4. Pests & Diseases: There is no major pest incidence that has been reported. The overall intensity of pests and diseases remained below the Economic Threshold Level.
