

CROP WEATHER WATCH GROUP (CWWG) WEEKLY REPORT

(as on 02.03.2026)

Key Insights

1. Rabi Sowing Status: Summer sowing data collection has been started from 9th February, 2026 and the sowing is in preliminary stage. As on February 27, 2026, the area sown under summer crops is 26.53 lakh ha as compared to 27.42 lakh ha during the corresponding period of last year. Of this, area of 21.80 lakh ha has been sown under Rice this year.

- As on 27.02.2026, 99% of area has been harvested for Kharif crops all over India.

2. Weather Update:

a) **Temperature:** Maximum temperature is likely to be above normal in NW India, East India, many parts of NE India, Chhattisgarh, Tamil Nadu, CAP, Coastal Karnataka, Konkan-Goa and some parts of Saurashtra-Kutch. Maximum temperature is likely to be below normal in many parts of Central India, Maharashtra, Telangana, Rayalaseema, and many parts of Karnataka and Kerala.

b) **Rainfall Distribution:** From March 01- March 02 2026, the All-India cumulative rainfall is 89% lower than its Long Period Average (LPA), with regional variations: (i) East & Northeast India: (-) 63%; (ii) Northwest India: (-) 100%; (iii) Central India: (-) 100%; and South Peninsula: (-) 56%.

- A feeble Western Disturbance, light rainfall/snowfall likely over Jammu-Kashmir-Ladakh during 04th-07th March, 2026.
- Isolated light rainfall/snowfall likely over Jammu-Kashmir during 04th-07th March.
- Strong surface winds very likely over Haryana, Punjab, Uttar Pradesh during 02nd -03rd March.
- Isolated to Scattered rainfall activity likely over Western Himalayan region, Kerala & Mahe and Sub-Himalayan West Bengal & Sikkim.
- Scattered to fairly widespread rainfall activity likely over Northeast India.
- Overall, rainfall is likely to be below normal over most parts of the country.
- Maximum temperatures are likely to continue to be appreciably to markedly above normal by 4-7°C over many parts of Northwest India during next 5 days.

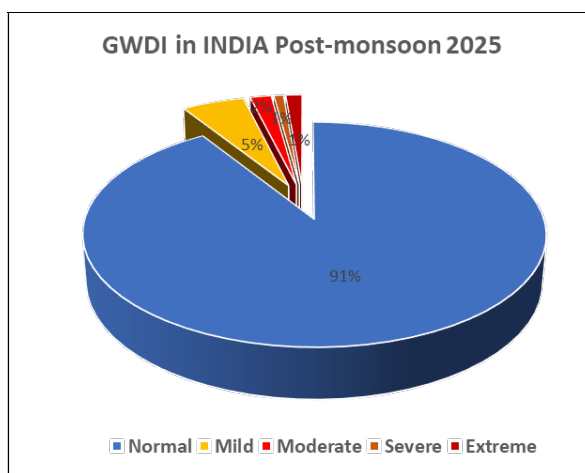

3. Inputs Situation

a) **Water Reservoir Status:** As on 26 February 2026, the total live water storage in 166 important reservoirs across the country (monitored by CWC) is 108.338 billion cubic meter, which is 59% of total live storage capacity (183.565 BCM). The current year's

storage is nearly 112.38 percent of last year's storage and 125.37 percent of the average storage of the last ten years during the corresponding period. The overall storage position is better than the corresponding period of last year in the country as a whole and is also better than the Normal storage during the corresponding period.

b) Groundwater Levels: In August 2025, In Post-monsoon 2025, around 90% of the country's monitoring stations exhibited a depth to water level within 10 meters below ground level. Deeper water levels of more than 20 m are observed in around 5% of stations of the country covering mainly the western states, especially Western Rajasthan, Punjab, Haryana and Chandigarh.

- The deeper groundwater level in the states like Western Rajasthan, Punjab, Haryana and Chandigarh during Post-monsoon 2025 has been significantly influenced by the over extraction of groundwater compared to the recharge during the monsoon period.
- Annual water level comparison with the previous year Post-monsoon 2024 to Post-monsoon 2025 has shown that about 63% of total analyzed stations of the country experienced rise in annual water level fluctuation may be attributed to the less groundwater extraction compared to 2024.
- About 73% of the analyzed stations of the unconfined aquifer experienced a rise of water level in the decadal mean water level fluctuation of 2015-2024 with respect to Post-monsoon 2025.
- The Groundwater Drought Indices indicate that in **Post-monsoon 2025**, groundwater conditions across India remained largely stable, with **91% of monitoring stations** showing **no deficit**. However, localized deficits were observed in several regions – notably in Meghalaya, Nagaland, and the Dadar Nagar Havili & Daman & Diu.

c) Fertilizers: The fertilizer supply remains stable across all products.

4. Pests & Diseases: Intensity of pests and diseases at some fields has been reported to be above Economic Threshold Level for Citrus (Gummosis) and Chilli (Leaf curl) in Maharashtra. The Advisory has been issued by the survey team to the farms and regular monitoring is being

carried out. The overall intensity of pests and diseases remained below the Economic Threshold Level.

NOTES :

- RainFall figures are based on operation data.
- Small figures indicate actual rainfall (mm), while bold figures indicate Normal rainfall (mm).
- Percentage Departures of rainfall are shown in brackets.

Rainfall Forecast:

- Overall, rainfall is likely to be below normal over most parts of the country except Kashmir and adjoining Leh & Ladakh region where they were slightly above normal.

2. TEMPERATURE: MIN & MAX

Temperature

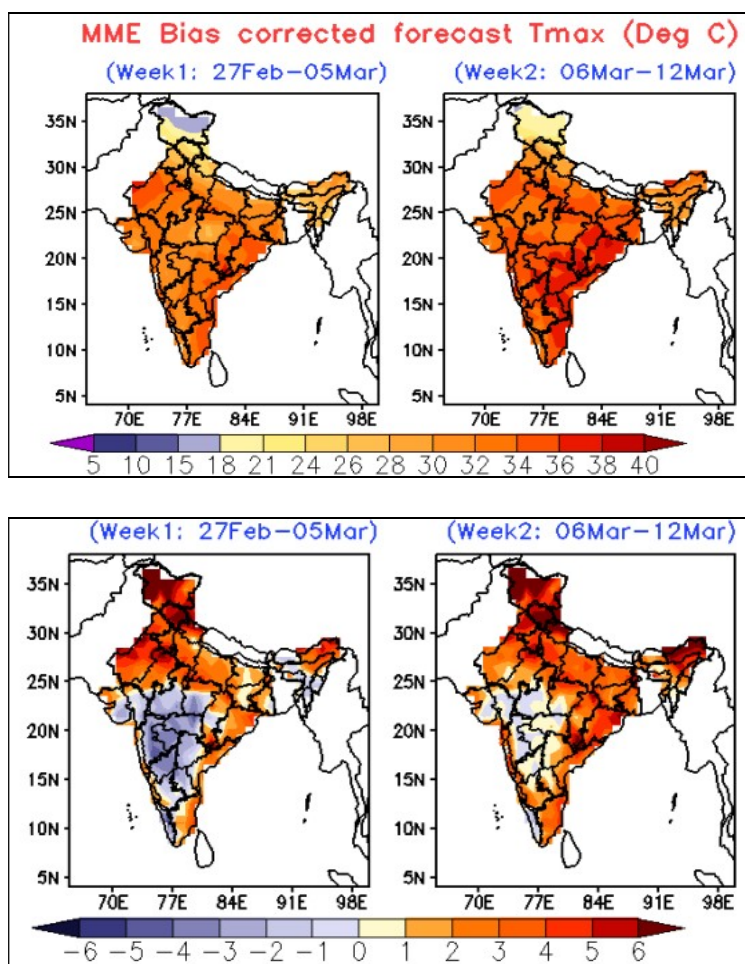

Week 1 (27 Feb – 05 March 2026):

- Maximum temperatures are likely to be above normal by 3-5°C over many parts of Northwest India during the week.

- Positive departures of maximum temperatures are likely to spread towards West, Central, East and northern Peninsular India and they are likely to be above normal by 2-4°C over these regions towards the end of the week.
- Minimum temperature is likely to be above normal in many parts of NW India, Bihar, Gujarat state, some parts of Madhya Maharashtra, many parts of M.P., South Karnataka, some parts of Tamil Nadu, Rayalseema, Southern parts of CAP and NE India. TMIN is likely to be below normal in many parts of East India, many parts of Maharashtra and Kerala.

Week 2 (06 March – 12 March 2026):

- Maximum temperatures are likely to be above normal (by 3-5°C) over most parts of the country except central & adjoining peninsular India, where they are likely to be near normal or slightly below normal by 1-2°C.
- Minimum temperatures are likely to be above normal (by 1-3°C) over most parts of northwest and northeast India, and below normal (by 2-4°C) over most parts of east, central, and peninsular India.

3. Crops

Rabi Crops - Area coverage

- **Rice:** About 21.80 lakh ha area coverage under Summer Rice has been reported as compared to 23.45 lakh ha during the corresponding period of last year.
- **Pulses:** About 1.15 lakh ha area coverage has been reported compared to 1.03 lakh ha during the corresponding period of last year.
- **Oilseeds:** About 1.69 lakh ha area coverage has been reported compared to 1.26 lakh ha during the corresponding period of last year.
