3. Inputs Situation

- a) **Water Reservoir Status:** As on 30 April 2026, the total live water storage in 166 important reservoirs across the country (monitored by CWC) is 71.082 billion cubic meter, which is 38.72% of total live storage capacity (183.565 BCM). The current year's storage is nearly 114.10 percent of last year's storage and 126.53 percent of the average storage of the last ten years during the corresponding period. The overall storage position is better than the corresponding period of last year in the country as a whole and is also better than the Normal storage during the corresponding period.

- **Groundwater Levels:** In Post-monsoon 2025, In January, 2026, around 75.8% of the country's monitoring stations exhibited a depth to water level within 10 meters below ground level. Deeper water levels of more than 20 m are observed in around 13.5% of stations of the country covering mainly the western states, especially Western Rajasthan, Punjab, Haryana and Chandigarh.
- The deeper groundwater level in the states like Western Rajasthan, Punjab, Haryana and Chandigarh during January, 2026 has been significantly influenced by the over extraction of groundwater compared to the recharge in the area, indicating negative water balance.
- About 70% of the analyzed stations of the unconfined aquifer experienced a rise of water level in January, 2026 when compared to the decadal mean water level of 2016-2025.
- The Groundwater Drought Indices indicate that in January, 2026, groundwater conditions across India remained largely stable, with 90.30% of monitoring stations falling under normal condition in respect of Ground Water Drought. However, localized deficits were observed in several regions — notably in Arunachal Pradesh, Himachal Pradesh, Meghalaya, Nagaland.

b) Fertilizers: The fertilizer supply remains stable across all products.

- 4. Pests & Diseases:** The overall intensity of pests and diseases remained below the Economic Threshold Level.
