The current year's storage is nearly 107 percent of last year's storage and 124 percent of the average storage of the last ten years during the corresponding period. The overall storage position is better than the corresponding period of last year in the country as a whole and is also better than the Normal storage during the corresponding period.

b) Groundwater Levels: About 43.1% of the total monitoring wells show depth to water level in the range of 0 to 5 m below ground level and 37.6% show depth to water level in the range of 5 to 10 m below ground level. About 19.2% of the total monitoring wells show water level deeper than 10 m below ground level. The groundwater level fluctuation analysis of Pre-monsoon 2025 with decadal mean of Pre-monsoon (2015-2024) indicates that 67.7% of analysed wells are showing rise and 33.0% are showing fall in water level. Remaining 0.3% stations analysed do not show any change in water level.

As per the Ground Water Drought Indices (GWDI), in pre-monsoon 2025, 90% of the analysed wells are in the normal category, while 10% of the analysed wells are in the drought category.

c) Seeds and Fertilizers: For Kharif 2025, certified seed availability is 178.64 lakh quintals against a requirement of 164.05 lakh quintals, ensuring a surplus of 14.60 lakh quintals. The fertilizer supply remains stable across all products.
