3. Inputs Situation

- a) **Water Reservoir Status:** As on 26 December 2025, the total live water storage in 166 important reservoirs across the country (monitored by CWC) is 147.04 billion cubic meter, which is 80.1% of total live storage capacity (183.565 BCM). The current year's storage is nearly 106.78 percent of last year's storage and 123.25 percent of the average storage of the last ten years during the corresponding period. The overall storage position is better than the corresponding period of last year in the country as a whole and is also better than the Normal storage during the corresponding period.
- b) **Groundwater Levels:** In August 2025, around 89% of the country's monitoring stations exhibited a depth to water level within 10 meters below ground level. Deeper water levels of more than 20 m are observed in around 5% of stations of the country covering mainly the western states, especially Western Rajasthan, Punjab, Haryana and Chandigarh.
- The deeper groundwater level in the states like Western Rajasthan, Punjab, Haryana and Chandigarh during August 2025 has been significantly influenced by the over extraction of groundwater compared to the recharge during the monsoon period.
 - Annual water level comparison with the previous year August 2024 to August 2025 has shown that about 56.5% of total analyzed stations of the country experienced rise in annual water level fluctuation because of the higher rainfall in 2025 compared to 2024 in Monsoon period.
 - About 70% of the analyzed stations of the unconfined aquifer experienced a rise of water level in the decadal mean water level fluctuation of 2015-2024 with respect to August 2025.

- c) **Fertilizers:** The fertilizer supply remains stable across all products.

4. **Pests & Diseases:** There is no major pest incidence that has been reported. The overall intensity of pests and diseases remained below the Economic Threshold Level.
