3. *Inputs Situation*

- a) *Water Reservoir Status*: As on 12 March 2026, the total live water storage in 166 important reservoirs across the country (monitored by CWC) is 98.913 billion cubic meter, which is 53.88% of total live storage capacity (183.565 BCM). The current year's storage is nearly 112.00 percent of last year's storage and 126.28 percent of the average storage of the last ten years during the corresponding period. The overall storage position is better than the corresponding period of last year in the country as a whole and is also better than the Normal storage during the corresponding period.
- b) *Groundwater Levels*: In Post-monsoon 2025, around 90% of the country's monitoring stations exhibited a depth to water level within 10 meters below ground level. Deeper water levels of more than 20 m are observed in around 5% of stations of the country covering mainly the western states, especially Western Rajasthan, Punjab, Haryana and Chandigarh.
- The deeper groundwater level in the states like Western Rajasthan, Punjab, Haryana and Chandigarh during post-monsoon 2025 has been significantly influenced by the over extraction of groundwater compared to the recharge during the monsoon period.
 - Annual water level comparison with the previous year Post-monsoon 2024 to Post-monsoon 2025 has shown that about 63% of total analyzed stations of the country experienced rise in annual water level fluctuation may be attributed to the less groundwater extraction compared to 2024.
 - About 73% of the analyzed stations of the unconfined aquifer experienced a rise of water level in the decadal mean water level fluctuation of 2015-2024 with respect to Post-monsoon 2025.
 - The Groundwater Drought Indices indicate that in **Post-monsoon 2025**, groundwater conditions across India remained largely stable, with **91% of monitoring stations** showing **no deficit**. However, localized deficits were observed in several regions – notably in Meghalaya, Nagaland, and the Dadar Nagar Havili & Daman & Diu.

c) **Fertilizers:** The fertilizer supply remains stable across all products.

4. **Pests & Diseases:** Intensity of pests and diseases at some fields has been reported to be above the Economic Threshold Level for Citrus (Gummosis) and Chilli (Leaf curl) in Maharashtra. The Advisory has been issued by the survey team to the farms and regular monitoring is being carried out. The overall intensity of pests and diseases remained below the Economic Threshold Level.
