- a) **Water Reservoir Status:** As on 9 July 2026, the total live water storage in 166 important reservoirs across the country (monitored by CWC) is 59.443 billion cubic meters, which is 32.38% of total live storage capacity (183.565 BCM). The current year's storage is nearly 63.52 percent of last year's storage and 107.62 percent of the average storage of the last ten years during the corresponding period. The overall storage position is less than the corresponding period of last year in the country as a whole but is better than the Normal storage during the corresponding period.
- b) **Groundwater Levels:** The groundwater situation is largely stable across the country. Out of 9,085 monitoring wells, 87.8% (7,977 wells) fall under the normal category, while 12.2% of the wells exhibit varying levels of groundwater drought.

Approximately 69% of the wells have groundwater levels within 10 metres below ground level, whereas only about 4% have groundwater levels deeper than 40 metres, indicating good groundwater availability across most regions.

Groundwater drought is predominantly mild and confined to limited areas. Among the affected wells, 7.2% are classified as experiencing mild drought, 2.2% moderate drought, 0.9% severe drought, and 1.9% extreme drought.

According to the Pre-Monsoon 2026 Groundwater Drought Index, groundwater conditions across the country are predominantly normal, with groundwater stress restricted to limited areas in a few states.

c) Fertilizers: The fertilizer supply remains stable across all products.

4. **Pests & Diseases**: Over all intensity of pests and disease remained below Economic Threshold Level (ETL).
